UK PRINTING COMPANY

Improved security, app rationalisation, reduced cost

IEN helps UK printing company to futureproof their IT strategy, to implement new technology through the reinvestment of savings.

THE PROBLEM

A UK printing company had recently invested in digital print technology which revealed legacy IT management issues.

They were experiencing higher-than-expected monthly costs for a low-rate service from a third-party supplier.

The company also recognised that there were potential savings to be found across their operations, including software and an excessive application portfolio.

The IT and Finance teams realised they lacked the time and expertise to identify these cost reduction challenges.

OUR SOLUTION

We implemented the following solutions to address their IT challenges:

Using our highly developed diagnostic tools, a comprehensive analysis of the company's IT Spending was conducted, including a high-level mapping of the infrastructure, applications, and associated costs. IEN's methodology is data-driven enabling evidence based decision-making for the client's leadership team's.

THEIR OUTCOME

The implementation of the solution resulted in the following positive outcomes:

- Significant Cost Savings, eliminating unnecessary expenses.
- Increasing security measures across the IT estate, safeguarding the company's data and systems against potential threats.
- The company's IT strategy was realigned to meet the business needs for the foreseeable future.
- Streamlined their application portfolio by removing unused and legacy software, reducing complexity and optimising core applications.
- The company reviewed the rationalised software licenses, ensuring they were only paying for the necessary and relevant licenses.
